Air Purifier

Yap Song Lin (1823505)

Jayvien Ng (1822223)

Jia Nan (1802191)

Background

Purpose

Our main goal for this project is to design a low cost & effective air purifier so that users from all walks of life are able to enjoy clean air in the event of an air pollution.

Components

- ESP32 Module
- GP2Y1014AU0F Dust Density Sensor
- MQ2 & MQ135 Gas Sensor
- DHT 11 Temperature & Humidity Sensor
- 16x2 Matrix LCD Display
- HEPA Dust Filter
- Fans
- LED & Button

DEMO

Features

- This air purifier can adjust the airflow based on the air quality and displays environmental readings such as Humidity, Temperature and Dust Density on the LCD Display.
- It also contains sensors that can detect harmful gases and alert the user.

Further Improvements

1. Adding more features such as smartphone support
2. Putting more space inside to allow better air flow
3. Having a more efficient fan to draw air through the filter.
